Brendan and others,

I've got two versions of the MaxEnt 2006 NSO habitat data from Dave. One has more area classified no-data and less classified as habitat value zero. The other has the inverse.

I'm setting up HexSim so that owls will not enter the no-data areas, but they are allowed (possibly with some hesitation) to travel through the habitat value zero areas.

Dave and I are wondering if we want to create a map that's somewhere in-between the two extremes that we presently have. I've attached screenshots of these two maps. The maps themselves are too large to email.

Take a look, and give us your feedback.

Thanks,

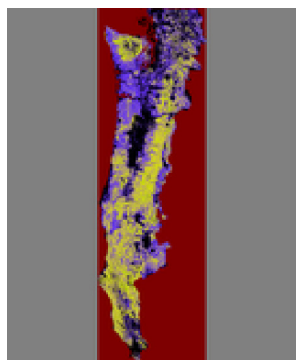

Nathan & Dave
